

Design Project # _____

Grade 7

Date: _____

Guiding Question:

Name: _____

Class : _____

Create

Creating a product or a solution that meets the Design Specification is the ultimate goal. In order to assess this stage, a design folder and a process journal must be submitted. Students are expected:

- to document, with a series of photographs or a video and a dated record, the process of making their product/solution, including when and how they use tools, materials and techniques.
- Students are expected to follow their plan, to evaluate the plan and describe any changes they make while they are creating the product/solution.

You may sometimes embark upon a very ambitious project, or encounter unforeseen circumstances. In some circumstances a product/solution that is incomplete or does not function fully can still achieve one of the levels awarded for this criterion. See the rubrics presented in the booklet given.
